

The probe reads the file header instead of trusting the extension. Magic bytes are authoritative because extensions are frequently wrong. A single reference page must not outvote multi-column body pages. Document routing decides which extraction pipeline a file deserves.

The gutter between columns is found by merging text intervals per band. A converter that ignores page geometry will interleave columns of text. Structure is lost when a layout-aware reader is replaced by a naive one.

Document routing decides which extraction pipeline a file deserves. The gutter between columns is found by merging text intervals per band. Layout is measured per horizontal band, not from the page as a whole. Document routing decides which extraction pipeline a file deserves. A converter that ignores page geometry will interleave columns of text.

Magic bytes are authoritative because extensions are frequently wrong. A converter that ignores page geometry will interleave columns of text. Layout is measured per horizontal band, not from the page as a whole. A converter that ignores page geometry will interleave columns of text.

Magic bytes are authoritative because extensions are frequently wrong. Document routing decides which extraction pipeline a file deserves. Superscripts, italics and headings survive a layout-aware conversion. A converter that ignores page geometry will interleave columns of text. Layout is measured per horizontal band, not from the page as a whole.

A single reference page must not outvote multi-column body pages. Superscripts, italics and headings survive a layout-aware conversion. Document routing decides which extraction pipeline a file deserves. Superscripts, italics and headings survive a layout-aware conversion. Superscripts, italics and headings survive a layout-aware conversion.

Document routing decides which extraction pipeline a file deserves. Layout is measured per horizontal band, not from the page as a whole. Document routing decides which extraction pipeline a file deserves. The gutter between columns is found by merging text intervals per band.

A scanned page carries no text layer and must be rendered as an image. Magic bytes are authoritative because extensions are frequently wrong. The probe reads the file header instead of trusting the extension.

A converter that ignores page geometry will interleave columns of text. Superscripts, italics and headings survive a layout-aware conversion. A scanned page carries no text layer and must be rendered as an image. The gutter between columns is found by merging text intervals per band. A single reference page must not outvote multi-column body pages.

A converter that ignores page geometry will interleave columns of text. Superscripts, italics and headings survive a layout-aware conversion. Superscripts, italics and headings survive a layout-aware conversion.
